

Jumanazar Saidov

Backend Engineer | Java | Spring Boot | Microservices | SQL

jumanazar.saidov@gmail.com | linkedin.com/in/jsr1611 | github.com/jsr1611 | Portfolio | Seoul, South Korea

PROFESSIONAL SUMMARY

Backend Engineer with 6+ years of experience designing and shipping microservices, RESTful APIs, and data pipelines in **Java/Spring Boot**. Core strengths in SQL performance tuning, legacy system modernization, and CI/CD on **AWS and Kubernetes**. Domain experience across automotive (Hyundai), government, and SaaS platforms. Open to remote and relocation opportunities.

TECHNICAL SKILLS

Languages: Java (8/11/17/21), JavaScript, TypeScript, Python, SQL, Kotlin

Frameworks: Spring Boot, Spring Cloud, Spring Data, Hibernate, Angular, React, Node.js, NestJS, FastAPI

Architecture: Microservices, REST, gRPC, Event-Driven (Kafka, RabbitMQ), Domain-Driven Design, SOLID

Data: PostgreSQL, MySQL, MongoDB, Oracle (PL/SQL), Redis, SQL tuning, indexing, data migration

DevOps & Cloud: Docker, Kubernetes, Jenkins, AWS (EC2, RDS, S3), GCP, CI/CD, Git

Testing & Tools: JUnit, Mockito, Postman, Jira, Confluence, Agile/Scrum, Code Reviews

EXPERIENCE

Lead Software Engineer, *PromDav AI Solutions – David E&C*

Jun 2026 – Present

- Architecting and leading the development of AI-driven automation solutions for enterprise ERP workflows and email processing pipelines.
- Designing scalable backend architectures (Java/Spring Boot, Microservices) to integrate LLM capabilities into legacy enterprise systems.
- Defining technical strategy, system designs (TDDs), and engineering standards across the AI integration pipeline.

Senior Software Engineer, *Toptal – TheHelloApp.com (Contract)*

Feb 2025 – Dec 2025

- Improved history log API response time by **10x** by profiling slow SQL queries, adding composite indices, and refactoring N+1 queries across 3 microservices.
- Redesigned legacy chat service into a single-thread architecture, enabling per-user read statuses and reducing customer support tickets by **30%**.
- Authored technical design documents for 4+ core features and drove cross-functional execution with frontend and QA teams.
- Conducted 50+ code reviews, identifying performance anti-patterns and establishing guidelines that reduced production hotfixes.

Senior Software Engineer, *FPT Software Korea – Hyundai AutoEver America (Contract)*

May 2024 – Mar 2025

- Designed RESTful APIs using Java 17/21, Spring Boot, and Kafka for Hyundai's Connected Car Data Integration platform, migrating 5+ legacy modules into microservices.
- Built ETL pipelines in Java and Node.js to migrate and transform **2M+ records** across PostgreSQL, MongoDB, and Oracle with zero data loss.
- Maintained Kubernetes CI/CD pipelines (ArgoCD), reducing deployment time by **25%** through parallelized build stages and caching.
- Developed internal admin UI tools that streamlined developer workflows and cut manual configuration effort by **40%**.

Software Engineer, *AttoLabs EU – BUBE Portal*

Aug 2023 – Apr 2024

- Developed RESTful APIs (Kotlin/Spring Boot) and Angular UI components for a German national environmental data reporting platform serving 16 states.
- Resolved 50+ bugs/vulnerabilities and reviewed 3–5 PRs daily, maintaining 85%+ code coverage with JUnit and Mockito.

Software Engineer, *SweetK Co., Ltd. – South Korea*

Mar 2022 – Jun 2023

- Built backend APIs and frontend features for 4 production apps including data annotation tools and tourism CMS platforms (*VisitSeoul.net*).
- Implemented Jenkins CI/CD pipelines to automate releases, monitoring, and rollback procedures.

Software Engineer, *DLIT Co., Ltd. – South Korea*

May 2020 – Aug 2021

- Designed real-time data collection/visualization apps (Java, C#, MS SQL) deployed in semiconductor manufacturing clean rooms.

Graduate Research Assistant, *MSIS Lab, Chungbuk National University*

Aug 2019 – Jul 2020

- Developed an image annotation/detection tool (Python, OpenCV, YOLOv3), boosting accuracy from 65% to 100% via model fine-tuning.

EDUCATION

MA, IT Technology Management, *KAIST*

2015 – 2017

- GPA: 3.6/4.3 | Korean Government Scholarship Recipient

BS, Telecommunication Engineering, *Tashkent University of Information Technologies (TUIT)*

2009 – 2013

- Government Undergraduate Scholarship Recipient
